THIS IS UNEVALUATED INFORMATION

- The northeast end of the pipeline from the Lispe fields (Y3/A07) is located on the south bank of the Danube to the north of Almasfüzitö. (See sketch.)
- There is no actual harbor. The tankers are filled partly from the pipeline and partly from floating tanks which are anchored near two landing docks. These tanks have a capacity of 1,000 tons each. Then several vessels are waiting to be loaded, the smaller ones are filled while at anchor from the tanks.
- In the event of a breakdown of the pipeline, the reserve oil from the tanks is used.
- It is estimated that an average of approximately 1,400 1,600 tons of oil is loaded daily from this station.
